Yellow Transparent Apple

Malus 'Yellow Transparent'

Height: 16 feet

Spread: 15 feet

Sunlight: ○

Hardiness Zone: 3

Description:

A very attractive medium summer apple; translucent pale yellow skin; excellent for sauces and pies; ideal for home landscapes, needs well-drained soil and full sun

Edible Qualities

Yellow Transparent Apple is a small tree that is typically grown for its edible qualities. It produces large yellow round apples (which are botanically known as 'pomes') with hints of light green and white flesh which are usually ready for picking from early to mid summer. The apples have a sweet taste and a crisp texture.

The apples are most often used in the following ways:

- Fresh Eating
- Baking
- Sauces

Features & Attributes

Yellow Transparent Apple features showy clusters of fragrant white flowers with shell pink overtones along the branches in mid spring, which emerge from distinctive red flower buds. It has forest green deciduous foliage. The pointy leaves turn yellow in fall. The fruits are showy yellow apples with hints of light green, which are carried in abundance from early to mid summer. The fruit can be messy if allowed to drop on the lawn or walkways, and may require occasional clean-up.

This is a deciduous tree with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition. This is a high maintenance plant that will require regular care and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Messy
- Disease

Aside from its primary use as an edible, Yellow Transparent Apple is sutiable for the following landscape applications;

- Accent
- Shade
- Orchard/Edible Landscaping

Planting & Growing

Yellow Transparent Apple will grow to be about 16 feet tall at maturity, with a spread of 15 feet. It has a low canopy with a typical clearance of 4 feet from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 50 years or more. This variety requires a different selection of the same species growing nearby in order to set fruit.

This tree is typically grown in a designated area of the yard because of its mature size and spread. It should only be grown in full sunlight. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.
